from $30.00 to $100.00 each.
5% discount for cash with order.

Carolina Hemlock is unique in habit, with dark, dense, tufted foliage on sweeping pendulous branches, with a “Japanese effect.” It is hardier and more adapted to trying city atmospheres than the Common or Canadian Hemlock, and seems to thrive in southern latitudes where the latter becomes thin, yellow and unsightly.

After the disastrous spring and winter of 1917-18, Prof. C. S. Sargent, Director of Arnold Arboretum, says of this tree: “Numerous specimens of the Carolina Hemlock (Tsuga caroliniana) have been uninjured by the cold and drought of the year. This is one of the handsomest of all cone-bearing trees which can be grown in this part of the country.”

At Boxford-Highlands Nursery may be seen large solid blocks of Carolina Hemlock, each tree a specimen regardless of size.

*For best results* orders should be placed early, and planting done as soon as the ground can be worked.

Catalog of Hardy American plants on request.
"The Most Beautiful American Conifer"

Carolina Hemlock

(*Tsuga caroliniana*)

Photographed by Harlan P. Kelsey at the Arnold Arboretum, Jamaica Plain, Mass.

"Its dense, dark foliage, sweeping semi-pendulous branches and eventually pyramidal form, combine to give a charm not found in any other evergreen known to cultivation."

HARLAN P. KELSEY, Hardy American Plants, SALEM, MASS.
